Somebody Help me please!

My file was gone away again!
Where is the **perfect backup solution?**

Worried about **secure backup in the external storages** like USB flash memory, SSD, hard disks?
OMG, my **documents was gone away!** Haven't I even saved them?
Still using the Windows explorer to **find recently saved documents?**
Manually copying every single photo from your digital camera to your PC? **arrange your photo!**
Found **favorite web sites**, but it's not your machine? Ever experienced this?
Working on your reports, articles and manuscripts in the office, library and home?
But, **which version is the last one?**
Haven't you have experienced **data loss by faulty machines or lost USB devices?**

AFB Auto File Backup

- **AFB** is the most effective tool to backup and manage files (**Automatically in real time**)
- **AFB** prevents the loss that can occur because users often fail to save data and document files.
- **AFB** backups files **automatically from all the drives attached to PC. (including USB and network drives)**
 - Files from disks such as local harddisks, network-drives, USB-flash, USB-external harddisks, SSD, SD-cards, etc..
- Backup process is done automatically in real time **without user's interaction.**
- Realtime means **any time** users save their documents.

REALTIME BACKUP

What is difference?
